

UX Case Study

IMPROVING THE USER EXPERIENCE OF ZOMATO

Prepared by:

SOFIYYAH IBRAHIM

Role:

UI/UX Design Internship Submission

Date

July 8, 2026

INTRODUCTION

About Zomato

Zomato is one of the world's leading food delivery and restaurant discovery platforms. It enables users to browse restaurants, explore menus, order meals, make online payments, and track deliveries in real time.

Objective of this Case Study

The purpose of this case study is to evaluate the user experience of the Zomato mobile application identify usability challenges, and propose design improvements that enhance efficiency and overall user satisfaction.

Target Users

The primary users of Zomato include:

- Students looking for affordable meals
- Busy professionals ordering lunch or dinner
- Families ordering meals at home
- Individuals exploring new restaurants
- People who prefer the convenience of online food delivery

USER JOURNEY

User Journey

Stage	User Action	User Goal	Experience
Open App	Launches the application	Start ordering food	Easy
Login	Signs in or creates an account	Access personalized features	Smooth
Search	Searches for food or restaurants	Find preferred meals	Fast
Browse	Looks through restaurant menus and reviews	Compare available options	Good but can feel overwhelming
Add to Cart	Selects desired meals	Prepare order	Easy
Checkout	Reviews cart, enters address and payment method	Complete purchase	Slightly lengthy
Track Order	Monitors delivery status	Know arrival time	Excellent
Receive Order	Food is delivered	Enjoy meal	Satisfying

UX ANALYSIS

Strengths

- Clean and intuitive navigation.
- High-quality food images improve engagement.
- Powerful search and filtering options.
- Real-time order tracking.
- Helpful customer ratings and reviews

Weaknesses

1. **Homepage Feels Busy:** The homepage contains numerous promotional banners, advertisements, and offers, making it difficult for users to focus on finding food quickly.
2. **Restaurant Comparison is Difficult:** Users must open multiple restaurant pages individually to compare prices, ratings, delivery times, and menu options.
3. **Checkout could be Faster:** The checkout process includes several sections and repeated information, which may slow users down before completing their purchase.
4. **Too Many Promotional Popups:** Special offers and discounts frequently appear while browsing, which can interrupt the user's experience.

DESIGN IMPROVEMENTS

Improvement 1: Cleaner Home Screen

Problem: The homepage contains many promotional banners that compete for the user's attention

.Proposed Solution: Reduce promotional banners, prioritize the search bar, increase white space, and display recently ordered items first

Improvement 2: Restaurant Comparison Feature

Problem:

Comparing restaurants requires opening several pages one after another.

Proposed Solution:

Introduce a comparison feature that displays ratings, delivery time, pricing, delivery fee, and popular dishes side by side..

Improvement 3: Simplified Checkout Process

Problem:

Checkout includes multiple steps that can make completing an order feel longer than necessary.

Proposed Solution:

Merge address, payment, promo code, and order review into a single checkout screen to reduce steps and speed up order completion.

Conclusion

Zomato provides an efficient and enjoyable food ordering experience through its intuitive navigation, attractive interface, extensive restaurant selection, and reliable delivery tracking. However, opportunities exist to further improve usability by reducing homepage clutter, simplifying restaurant comparisons, and creating a faster checkout process. Implementing these improvements would enhance the overall user experience, reduce user effort, and increase customer satisfaction.
